Appendix A. Documented Methods and Materials

Study: *Beyond AI Share: A Preregistered Survey and Vignette Study of Perceived Control, Authorship, and Authenticity in AI-Assisted Creative Practice*

Frozen questionnaire: questionnaire_v1.0

Deployment numbering: Ankieto P01-P46

Questionnaire status: frozen as questionnaire_v1.0 before main-study recruitment

Appendix reporting freeze date: 2026-07-24

This appendix consolidates the preserved Study 1 record. It does not add procedures that were not documented before or during the study and does not reconstruct procedures or information that were not preserved. English translations are provided for reporting purposes. Participants received the Polish wording. The repository working file numbers the consent item P00 and the remaining elements P01-P45; this appendix uses the deployed Ankieto numbering P01-P46.

A1. Research question and H1-H6

Research question. How is the role of AI in the creative process associated with perceived authorship, perceived authenticity, perceived control, and creative identity threat?

Confirmatory hypotheses

- **H1.** Among creators using AI, a greater declared AI share in the final creative output would be associated with lower perceived authorship.
- **H2.** Among creators using AI, higher perceived control over the creative process would be associated with higher perceived authorship.
- **H3.** Perceived control would moderate the association between AI final share and authenticity, such that the predicted negative association would be weaker at higher levels of control.
- **H4.** Stronger expressive orientation toward art would be associated with stronger concern about authenticity and/or greater creative identity threat in the context of AI-assisted creation.

Exploratory hypotheses

- **H5.** Professional or more engaged creators may show both higher AI usefulness and higher creative identity threat than non-creators or less-engaged creators. “Ambivalence” was operationalized only as the coexistence of high ai_usefulness and high identity_threat; it was not a validated scale.
- **H6.** More frequent AI users would be more likely to view AI as a tool or assistant rather than as an independent creator.

The two-vignette comparison was planned separately. H1-H4 retained confirmatory status; H5-H6, group comparisons, psychometric sensitivity work, and model robustness checks remained exploratory.

A2. Full eligibility criteria

The documented inclusion criteria were:

- age 18 or older;
- informed consent;
- completion of the online questionnaire to a usable extent;
- membership in either the creator/creative-worker population of interest or the non-creator comparison group.

The intended creator population included professional and semi-professional creators, amateurs, students in artistic or creative fields, and people employed in creative work. Film/video, graphic design/illustration/design, photography, music/sound, writing/literature, screenwriting/dramaturgy/theatre, internet/social-media creation, and advertising/creative communication were named fields. Non-creators who primarily identified as art audiences formed the comparison group.

The preregistration permitted exclusion for lack of consent, extreme incompleteness, an implausibly short completion time suggestive of careless responding, identifiable duplication or technical invalidity, and membership in the pilot dataset. It did not define a numeric “implausibly short” threshold. The final analytic file contained 429 completed and consenting main-study records; all were retained in the primary analysis. Time thresholds were used only in sensitivity analyses.

A3. Recruitment dates and documented recruitment channels

- Main-study collection opened on **15 June 2026** and closed on **5 July 2026**.
- Recruitment used non-probability online outreach through social, professional, and creative networks.
- The strategy sought creators with AI experience, creators without AI experience, and a non-creator comparison group.
- The preserved record does not verify which individual planned channel generated each response. Planned lists of Facebook, LinkedIn, creative groups, direct messages, and student groups are recruitment planning materials, not evidence that every channel was used.
- Channel-specific reach, impressions, survey views, invitations delivered, and starts were not retained. Population response rates and channel-level conversion rates therefore cannot be calculated.

A4. Participant information and consent text

Preserved introductory text

English translations are provided for reporting purposes. Participants received the Polish wording.

Original Polish participant-facing text	English translation for reporting
W tej ankiecie pytamy o to, jak ludzie oceniają twórczość wspieraną przez AI. Interesuje nas szczególnie poczucie autorstwa, autentyczność, poczucie kontroli i obawy związane z twórczą tożsamością.	In this survey, we ask how people evaluate AI-assisted creative work. We are particularly interested in perceived authorship, authenticity, perceived control, and concerns related to creative identity.
Nie pytamy o to, czy AI jest ogólnie dobra albo zła. Chcemy zrozumieć, kiedy AI jest odbierana jako narzędzie, a kiedy zaczyna zmieniać poczucie, że dzieło jest „moje”.	We are not asking whether AI is generally good or bad. We want to understand when AI is perceived as a tool and when it begins to change the sense that a work is “mine.”
Ankieta jest anonimowa. Odpowiedzi będą analizowane zbiorczo.	The survey is anonymous. Responses will be analyzed in aggregate.

The survey then presented the required consent item:

Original Polish participant-facing text	English translation for reporting
P01. Czy wyrażasz zgodę na udział w anonimowym badaniu? <i>Tak, wyrażam zgodę;Nie, nie wyrażam zgody.</i>	P01. Do you consent to participate in this anonymous study? <i>Yes, I consent;No, I do not consent.</i>

A refusal ended the questionnaire. All age-band options began at 18 years. Participation was voluntary and respondents could stop completing the survey.

Transparency note

The respondent-facing text used the word “anonymous.” The survey platform nevertheless generated technical metadata, including IP addresses. Those data were used only in a private duplicate check and were removed from the analytic dataset. Accordingly, the publication describes the quantitative analytic dataset as **de-identified** and does not rely on “fully anonymous” as a technical characterization. No richer standalone information sheet is preserved in the source documentation, and none is reconstructed here.

No formal prospective ethics approval and no formal exemption were obtained. Consent and data-minimization safeguards do not constitute such approval or exemption.

A5. Full questionnaire wording and A6. exact response options

Unless a different anchor is shown below, all attitudinal items used the same five-point instruction:

Original Polish participant-facing text	English translation for reporting
1 = zdecydowanie się nie zgadzam;2 = raczej się nie zgadzam;3 = ani się zgadzam, ani się nie zgadzam;4 = raczej się zgadzam;5 = zdecydowanie się zgadzam	1 = strongly disagree;2 = somewhat disagree;3 = neither agree nor disagree;4 = somewhat agree;5 = strongly agree

Original Polish participant-facing text	English translation for reporting
Jeśli nie korzystasz z AI albo nie tworzysz zawodowo, odpowiedz na podstawie swojej oceny takich sytuacji.	If you do not use AI or do not create professionally, answer based on your assessment of such situations.

Consent and profile

Deployed item	Variable	Required	Exact Polish wording and response options	English translation for reporting
P01	consent	yes	Czy wyrażasz zgodę na udział w anonimowym badaniu? Tak, wyrażam zgodę;Nie, nie wyrażam zgody.	Do you consent to participate in this anonymous study? Yes, I consent;No, I do not consent.
P02	age	yes	Ile masz lat? 18-24; 25-34; 35-44; 45-54; 55 lub więcej;Wolę nie odpowiadać.	How old are you? 18-24; 25-34; 35-44; 45-54; 55 or older;I prefer not to answer.
P03	gender	no	Jak określasz swoją płeć? Kobieta;Mężczyzna;Osoba niebinarna;Inna odpowiedź;Wolę nie odpowiadać.	How do you describe your gender? Woman;Man;Non-binary person;Another answer;I prefer not to answer.
P04	creative_status	yes	Które określenie najlepiej Cię opisuje? Twórca/twórczyni zawodowy/a; Twórca/twórczyni półzawodowy/a;Amator/amatorka;Student/studentka kierunku artystycznego lub kreatywnego;Osoba pracująca kreatywnie, ale nieidentyfikująca się głównie jako artysta/artystka;Nie zajmuję się twórczością ani pracą kreatywną - jestem głównie odbiorcą/odbiorczynią sztuki.	Which description fits you best? Professional creator;Semi-professional creator;Amateur creator;Student in an artistic or creative field; Person working in a creative role but not identifying primarily as an artist;I do not engage in creative practice or creative work - I am primarily an audience member for art.
P05	creative_field	yes	Jaki jest Twój główny obszar twórczy lub kreatywny? Film/wideo; Grafika/ilustracja/design; Fotografia; Muzyka/dźwięk; Pisanie/literatura; Scenariusz/dramaturgia/teatr; Social media/twórczość internetowa; Reklama/komunikacja kreatywna; Nie zajmuję się twórczością ani pracą kreatywną; Inny.	What is your main creative field or area of creative work? Film/video; Graphic arts/illustration/design; Photography; Music/sound; Writing/literature; Screenwriting/dramaturgy/theatre; Social media/online content creation; Advertising/creative communication; I do not engage in creative practice or creative work; Other.
P06	creative_experience	yes	Jak długo zajmujesz się twórczością lub pracą kreatywną? Nie zajmuję się twórczością ani pracą kreatywną; Mniej niż rok; 1-3 lata; 4-7 lat; 8-15 lat; Ponad 15 lat.	How long have you been engaged in creative practice or creative work? I do not engage in creative practice or creative work; Less than one year; 1-3 years; 4-7 years; 8-15 years; More than 15 years.
P07	creative_context	yes	W jakim kontekście najczęściej tworzysz lub pracujesz kreatywnie? Twórczość własna; Zlecenia komercyjne; Praca w agencji, studiu lub firmie; Praca w zespole produkcyjnym; Edukacja lub rozwój umiejętności; Nie zajmuję się twórczością ani pracą kreatywną; Inny.	In what context do you most often create or do creative work? Personal creative practice; Commercial commissions; Work in an agency, studio, or company; Work in a production team; Education or skill development; I do not engage in creative practice or creative work; Other.

AI-use items

Deployed item	Variable	Required	Exact Polish wording and response options	English translation for reporting
P08	ai_frequency	yes	Jak często korzystasz z narzędzi AI w pracy twórczej lub kreatywnej? Nigdy; Rzadziej niż raz w miesiącu; Kilka razy w miesiącu; Kilka razy w tygodniu; Codziennie lub prawie codziennie.	How often do you use AI tools in creative practice or creative work? Never; Less than once a month; Several times a month; Several times a week; Daily or almost daily.
P09	ai_stages	yes; multiple choice	Na których etapach procesu zdarza Ci się korzystać z AI? Nie korzystam z AI; Inspiracja lub poszukiwanie kierunku; Research; Generowanie pomysłów; Tworzenie szkiców lub wariantów; Redakcja, korekta lub postprodukcja; Tworzenie finalnego materiału; Publikacja, opis lub dystrybucja.	At which stages of the process do you sometimes use AI? I do not use AI; Inspiration or exploring a direction; Research; Idea generation; Creating drafts or variants; Editing, proofreading, or post-production; Creating the final material; Publication, description, or distribution.
P10	ai_tools	no; multiple choice	Jakich narzędzi AI używasz lub zdarzyło Ci się używać? Tekst; Obraz; Wideo; Muzyka lub dźwięk; Głos; Analiza danych lub trendów; Automatyzacja pracy; Nie korzystam z AI; Inne.	What AI tools do you use or have you ever used? Text; Image; Video; Music or sound; Voice; Data or trend analysis; Work automation; I do not use AI; Other.
P11	ai_final_share	yes	Jak duży jest zwykle udział AI w finalnym efekcie Twojej pracy? Jeśli nie korzystasz z AI, wybierz 1 - żaden lub prawie żaden. 1 = żaden lub prawie żaden; 2 = niewielki; 3 = umiarkowany; 4 = duży; 5 = bardzo duży.	How large is AI's usual share of the final output of your work? If you do not use AI, select 1 - none or almost none. 1 = none or almost none; 2 = small; 3 = moderate; 4 = large; 5 = very large.
P12	ai_competence	yes	Jak oceniasz swoją swobodę korzystania z narzędzi AI? 1 = bardzo niska; 2 = raczej niska; 3 = średnia; 4 = raczej wysoka; 5 = bardzo wysoka.	How do you rate your ease in using AI tools? 1 = very low; 2 = somewhat low; 3 = moderate; 4 = somewhat high; 5 = very high.

Operational note: “Nie korzystam z AI” / “I do not use AI” was treated as a mutually exclusive response option in P09 and P10.

Attitudinal indicators

All items below were required and used the common agreement scale 1-5.

Deployed item	Variable	Exact Polish item wording	English translation for reporting
P13	authorship_01	Efekt pracy stworzonej z pomocą AI nadal może być moim dziełem.	An output created with AI assistance can still be my work.
P14	authorship_02	Czuję się autorem/autorką pracy, jeśli to ja podejmuję kluczowe decyzje twórcze.	I feel that I am the author of a work if I make the key creative decisions.
P15	authorship_03_reverse	Im większy udział AI w finalnym materiale, tym trudniej mi uznać pracę za w pełni moją.	The greater AI's share in the final material, the harder it is for me to regard the work as fully mine.
P16	authorship_04_reverse	Praca wygenerowana głównie przez AI wydaje mi się mniej moja niż praca, którą sam/a prowadzę od początku do końca.	A work generated mainly by AI feels less mine than a work that I direct myself from start to finish.
P17	authenticity_01	Dzieło wspierane przez AI może być autentyczne, jeśli wyraża intencję człowieka.	An AI-assisted work can be authentic if it expresses human intention.
P18	authenticity_02	Efekt pracy z AI może zachować osobisty styl twórcy.	An AI-assisted output can retain the creator's personal style.
P19	authenticity_03_reverse	Użycie AI osłabia autentyczność dzieła, nawet gdy pomysł pochodzi od człowieka.	Using AI weakens the authenticity of a work, even when the idea comes from a human.
P20	authenticity_04_reverse	Im bardziej efekt przypomina typową estetykę AI, tym mniej wydaje mi się autentyczny.	The more an output resembles a typical AI aesthetic, the less authentic it seems to me.
P21	control_01	Podczas pracy z AI mam poczucie, że to ja prowadzę proces.	When working with AI, I feel that I am directing the process.
P22	control_02	Potrafię świadomie wybierać, poprawiać i odrzucać propozycje AI.	I can deliberately select, revise, and reject AI suggestions.
P23	control_03_reverse	AI czasem przejmuję kierunek pracy bardziej, niż bym chciał/a.	AI sometimes takes over the direction of the work more than I would like.
P24	control_04	Ostateczny kształt pracy zależy przede wszystkim od moich decyzji.	The final form of the work depends primarily on my decisions.
P25	identity_threat_01	Rozwój AI budzi we mnie niepokój o wartość pracy twórczej ludzi.	The development of AI causes me concern about the value of human creative work.
P26	identity_threat_02	AI może sprawić, że kompetencje twórcze będą postrzegane jako mniej wyjątkowe.	AI may cause creative skills to be perceived as less distinctive.
P27	identity_threat_03	Obawiam się, że AI osłabi sens bycia twórcą w mojej dziedzinie.	I am concerned that AI will undermine the meaning of being a creator in my field.
P28	identity_threat_04_reverse	Traktuję AI przede wszystkim jako rozszerzenie warsztatu, a nie zagrożenie dla twórczej tożsamości.	I view AI primarily as an extension of my toolkit rather than as a threat to creative identity.
P29	expressive_orientation_01	Sztuka powinna przede wszystkim wyrażać osobiste doświadczenie człowieka.	Art should primarily express a person's own experience.
P30	expressive_orientation_02	W dziele ważna jest obecność ludzkiej intencji i wrażliwości.	The presence of human intention and sensibility matters in a work.
P31	expressive_orientation_03	Techniczne wykonanie jest mniej ważne niż to, czy dzieło niesie osobisty sens.	Technical execution is less important than whether the work conveys personal meaning.
P32	expressive_orientation_04_reverse	Dzieło może być wartościowe nawet wtedy, gdy nie wyraża osobistego doświadczenia autora.	A work can be valuable even when it does not express the author's personal experience.
P33	ai_as_tool_01	AI traktuję raczej jako narzędzie lub asystenta niż jako samodzielny twórcę.	I view AI more as a tool or assistant than as an independent creator.
P34	ai_as_tool_02	W pracy z AI najważniejszy pozostaje wybór i ocena dokonywana przez człowieka.	When working with AI, human selection and evaluation remain most important.
P35	ai_usefulness_01	AI może przyspieszyć przejście od pomysłu do pierwszej wersji pracy.	AI can speed up the transition from an idea to the first version of a work.
P36	ai_usefulness_02	AI pomaga eksplorować warianty, których sam/a mógłbym/mogłabym nie rozważyć.	AI helps me explore variants that I might not otherwise consider.
P37	ai_usefulness_03	AI może zwiększać możliwości twórcze człowieka, jeśli to człowiek wyznacza kierunek.	AI can expand human creative possibilities if the human creator sets the direction.

Vignette ratings and open-ended items

The exact vignette texts are reproduced in A8. Each vignette rating was required and used the common agreement scale 1-5.

Deployed item	Variable	Exact Polish item wording	English translation for reporting
P38	vignette_controlled_authorship	Finalny plakat można uznać za dzieło tej twórczyni.	The final poster can be regarded as the work of this creator.

Deployed item	Variable	Exact Polish item wording	English translation for reporting
P39	vignette_controlled_authenticity	Finalny plakat może być autentycznym wyrazem jej intencji.	The final poster can be an authentic expression of her intention.
P40	vignette_controlled_control	Twórczyni zachowała kontrolę nad procesem.	The creator retained control over the process.
P41	vignette_generated_authorship	Finalną pracę można uznać za dzieło tego twórcy.	The final work can be regarded as the work of this creator.
P42	vignette_generated_authenticity	Finalna praca może być autentycznym wyrazem jego intencji.	The final work can be an authentic expression of his intention.
P43	vignette_generated_control	Twórca zachował kontrolę nad procesem.	The creator retained control over the process.
P44	open_own_work_boundary	Optional long text: Co najbardziej decyduje o tym, że dzieło stworzone z udziałem AI nadal uznajesz za własne?	Optional long text: What most determines whether you still regard a work created with AI involvement as your own?
P45	open_authenticity_weakens	Optional long text: W jakiej sytuacji użycie AI osłabia autentyczność lub poczucie autorstwa?	Optional long text: In what situation does the use of AI weaken authenticity or the sense of authorship?
P46	open_ai_boundary	Optional long text: Czy istnieje granica użycia AI, której nie chciał(a)byś przekroczyć w swojej dziedzinie? Jeśli tak, jaka?	Optional long text: Is there a boundary in AI use that you would not want to cross in your field? If so, what is it?

Original Polish participant-facing text	English translation for reporting
Dziękujemy za udział w badaniu. Twoje odpowiedzi pomogą lepiej zrozumieć, jak twórcy i odbiorcy oceniają rolę AI w procesie twórczym.	Thank you for participating in the study. Your responses will help us better understand how creators and audiences evaluate the role of AI in the creative process.

A7. Full scoring key and reverse coding

Reverse-coded agreement items used 6 - original response.

Construct	Frozen primary items	Minimum valid items	Notes
authorship	authorship_01,authorship_03_reverse,authorship_04_reverse	2 of 3	P14/authorship_02 is auxiliary and is not in the primary composite.
authenticity	authenticity_01,authenticity_02,authenticity_03_reverse	2 of 3	P20/authenticity_04_reverse is auxiliary; its reverse-scored form represents concern about typical AI aesthetics.
control	control_01,control_02,control_03_reverse,control_04	3 of 4	control_03_reverse is reverse-coded.
identity_threat	identity_threat_01,identity_threat_02,identity_threat_03,identity_threat_04_reverse	3 of 4	identity_threat_04_reverse is reverse-coded.
expressive_orientation	expressive_orientation_01,expressive_orientation_02,expressive_orientation_03	2 of 3	P32/expressive_orientation_04_reverse is auxiliary and not in the primary composite.
ai_as_tool	ai_as_tool_01,ai_as_tool_02	2 of 2	Two-item mean.
ai_usefulness	ai_usefulness_01,ai_usefulness_02,ai_usefulness_03	2 of 3	Three-item mean.
vignette_controlled	controlled authorship, authenticity, control ratings	complete item mean in the frozen pipeline	Higher values indicate a more favorable evaluation.
vignette_generated	generated authorship, authenticity, control ratings	complete item mean in the frozen pipeline	Higher values indicate a more favorable evaluation.

Items carrying _reverse retain that suffix in exported/frozen variable names even when an auxiliary item is not part of a primary composite. The primary scores were retained despite low reliability; post hoc reduced indicators were not substituted.

AI users were classified primarily from ai_frequency: Nigdy indicated non-use, regardless of inconsistent selections in ai_stages or ai_tools. Creator status derived from creative_status. The main H1-H3 subgroup required both creator and AI-user status.

A8. Exact wording of both vignettes

Controlled-process vignette

Original Polish participant-facing text	English translation for reporting
Twórczyni przygotowuje plakat. Ma własny pomysł, szkicuje kompozycję, używa AI do wygenerowania kilku wariantów tła, wybiera jeden z nich, mocno go edytuje i sama decyduje o finalnym układzie.	A creator prepares a poster. She has her own idea, sketches the composition, uses AI to generate several background variants, selects one of them, edits it extensively, and decides on the final layout herself.

Respondents rated authorship, authenticity, and control using P38-P40.

Final-generator vignette

Original Polish participant-facing text	English translation for reporting
Twórca otrzymuje krótki opis zlecenia. Wpisuje go do narzędzia AI, wybiera pierwszy wygenerowany rezultat, wprowadza tylko drobne poprawki i przekazuje go jako finalną pracę.	A creator receives a brief description of the assignment. He enters it into an AI tool, selects the first generated result, makes only minor changes, and submits it as the final work.

Respondents rated authorship, authenticity, and control using P41-P43.

The scenarios were administered in the order shown. They were not randomized or counterbalanced. They jointly vary idea origin, number/selection of variants, degree of revision, and final decision authority. The paired difference therefore estimates evaluation of the bundled workflows, not separate causal effects of those components.

The vignettes also differed in protagonist gender and task context: the human-directed scenario described a female creator developing her own idea, whereas the final-generator scenario described a male creator responding to a commissioned brief. These features may also have contributed to the observed difference and were not independently controlled.

A9. Pilot changes documented before public launch

The pilot comprised **23 completed responses** and was excluded from the main dataset. It assessed technical operation, completion time, wording, vignette clarity, conditional logic, export structure, and scoring decisions. It was not a validation study.

Before questionnaire_v1.0 was frozen, the following changes were implemented in Ankieteo:

1. The non-creator P04 option was clarified to Nie zajmuję się twórczością ani pracą kreatywną - jestem głównie odbiorcą/odbiorczynią sztuki.
2. Ambiguous Nie dotyczy options in P05 and P07 were replaced by Nie zajmuję się twórczością ani pracą kreatywną.
3. P11 added: Jeśli nie korzystasz z AI, wybierz 1 - żaden lub prawie żaden.
4. Nie korzystam z AI in the P09 and P10 multiple-choice items was set or treated as mutually exclusive.
5. A manual preview test confirmed that the revised 13-screen survey worked.
6. Frozen scoring choices were documented before public recruitment, including the auxiliary status of authorship_02, authenticity_04_reverse, and expressive_orientation_04_reverse.

No H1-H6 wording or classification was changed by the pilot.

A10. Sample-size plan

The preregistered plan specified:

- preferred total target: N = 500;
- minimum usable total: N = 300;
- key subgroup: creators using AI;

- minimum key-subgroup target: N = 150;
- preferred key-subgroup range: N = 200-300.

The final sample was N = 429, with 164 creator AI users. Both minimum thresholds were met; neither preferred target was reached. The key subgroup matters because H1-H3 require actual variation in creator experience and AI final share. Total N cannot compensate for a small key subgroup in those tests.

A11. Known participant flow

Recorded stage/group	N
Records in frozen completed main-study export	429
Consent recorded as yes	429
Completed records	429
Records retained for primary analysis	429
Creators/creative workers	209
Non-creators/primarily art audiences	220
AI users	247
Creator AI users	164
Active creator AI users	102
Complete vignette pairs	428
Pilot records, stored separately and excluded	23

The equality of 429 completed, consenting, and retained records describes the final analytic export. It does not imply that everyone who viewed or started the survey completed it.

A12. Explicitly unavailable denominators

The following counts were not retained in a form suitable for reporting:

- all people reached by recruitment messages;
- all survey-link views or unique site visitors;
- all people who opened the survey;
- all people who started but did not submit;
- all people who declined consent before a retained record was created;
- channel-specific invitation, start, and completion counts.

Consequently, view rate, participation rate, completion rate, response rate, and channel-level conversion cannot be calculated. No denominator is imputed or inferred from final N.

A13. Duplicate and time-quality procedures

Platform-generated IP addresses were separated from analysis and examined only in a private technical duplicate check. The check identified 12 shared-IP groups containing 24 records. A shared IP address was not treated as proof of duplicate participation, and no record was automatically excluded on that basis. IP addresses and the record-level duplicate map are not included in this appendix or repository materials intended for release.

Completion duration was derived from platform start and submission times before exact timestamps were removed. Aggregate flags were:

Quality flag	N	Percent of 429
Duration under 2 minutes	53	12.35%
Duration under 3 minutes	113	26.34%
Duration over 2 hours	27	6.29%
Duration over 24 hours	12	2.80%

No duration flag caused automatic primary exclusion. Sensitivity analyses repeated the frozen tests after excluding durations under two minutes, under three minutes, and outside three to 120 minutes. These did not replace the primary full-sample/subgroup analyses.

A14. Missing-data rules

- No imputation was used.
- Three-item scores required at least two valid items; four-item scores required at least three; both ai_as_tool items were required.
- Regression/correlation analyses used complete cases for model variables.
- Optional open-ended nonresponse did not exclude quantitative records.
- Age had one missing response (0.23%); gender had two (0.47%).
- One respondent lacked the three controlled-vignette ratings, yielding N = 428 complete paired vignette scores.
- Frozen closed-item variables used in H1-H4 otherwise had no missing values.

A15. Software and package versions

The full frozen pipeline was reproduced on 24 July 2026 in an isolated temporary workspace. The exact package environment used for that run is no longer available: the script recorded package-version strings but did not preserve the interpreter path or a lockfile, and the only currently available Python runtime has a different package set. The earlier pandas version entry therefore cannot be independently verified and is not retained as a software-environment claim. In accordance with this limitation, the versions used in the completed reproducibility run are reported as not preserved rather than inferred from the current environment.

Component	Version in the completed reproducibility run
Python	version not preserved
numpy	version not preserved
pandas	version not preserved
scipy	version not preserved
statsmodels	version not preserved
matplotlib	version not preserved
Pillow	version not preserved

A programmatic inspection on 25 July 2026 of the only currently available project runtime returned Python 3.12.13, numpy 2.3.5, pandas 3.0.1, and Pillow 12.2.0; scipy, statsmodels, and matplotlib were not installed in that runtime. These values document the current inspection only and are not attributed retrospectively to the completed reproducibility run.

The reproducibility check began from the final de-identified quantitative CSV and did not open the raw Ankieteo export. It regenerated the scored file, alpha/omega estimates, descriptive tables, H1-H6 outputs, vignette statistics, time sensitivities, post hoc psychometric diagnostics, HC3/bootstrap checks, and figure files.

A16. Full preregistration deviations table

Element	Preregistered plan	Observed implementation	Status and interpretive consequence
Overall N	Target 500; minimum 300	N = 429	Preferred target not reached; minimum reached. Precision is lower than preferred.
Creator-AI N	Minimum 150; preferred 200-300	N = 164	Minimum reached; preferred range not reached, especially relevant to moderation precision.
Time exclusions	Implausibly short responses could be excluded	No numeric cutoff was preregistered; primary analysis retained all 429 and used three sensitivity filters	Deviation/clarification. Avoids selecting a primary threshold after data inspection; time sensitivity remains explicit.
Duplicate exclusions	Duplicates/invalid records could be excluded if identifiable	Shared-IP flags were insufficient to establish duplicate identity; no automatic exclusion	Clarification. Residual uncertainty remains and identifiers stay private.
Ethics/exemption status	Status would be documented before public launch according to relevant requirements	No prospective approval and no formal exemption were obtained	Material procedural deviation. It must remain disclosed and may limit journal eligibility.
Open-ended responses	Qualitative thematic summaries could be exploratory	Not analyzed or reported in Study 1	Not conducted. No effect on H1-H4; no qualitative claims are made.
Field comparisons	Conduct if cells allow meaningful interpretation	Broad exploratory work only; small field cells precluded strong field-specific claims	Implemented conditionally as planned.

H1-H4 tests, H5-H6 classification, frozen scoring, AI-user classification, missing-data score thresholds, pilot separation, and vignette paired analysis were implemented as preregistered or explicitly clarified without changing their meaning. The principal preregistration deviations and clarifications are summarized in Table A16.

A17. Data de-identification workflow

1. The raw Ankieteo workbook remained local and git-ignored.
2. The ingestion process mapped question content to stable variable names rather than relying only on platform column order.
3. Consent and completion status were checked.
4. Platform response identifiers were replaced by a study-specific `participant_id` in analytical files.
5. IP addresses, user-agent/browser/system information, referrers, exact platform identifiers, and exact timestamps were removed or kept outside the analytic dataset.
6. Only date/day-level collection information and derived duration/quality flags were retained where analytically necessary.
7. Full open-ended responses were excluded from the public quantitative dataset and require a separate privacy review.
8. The private duplicate check produced aggregate flags only for reporting; IP and record-level mappings were not committed.
9. Analysis used `art_ai_quant_anonymized.csv` and the derived `art_ai_scored_anonymized.csv`, not the raw workbook.
10. Any future participant-level release remains conditional on an additional privacy review. Raw exports will not be released.

The current data-availability restriction is a privacy measure, not evidence that the raw export is anonymous.

A18. AI/LLM use and human verification workflow

The disclosure used in the manuscript is:

AI-assisted tools were used only for language editing, translation, and manuscript assembly. All research, analytical, interpretive, and editorial decisions were made and verified by the author, who takes full responsibility for the manuscript. AI-assisted output did not determine hypothesis classifications, exclusions, model selection, or interpretation.

Human verification included inspection of source documentation, retention of preregistered scoring, non-removal of weak items from primary scores, direct comparison of reported numerical values with frozen output tables, a clean rerun of the quantitative pipeline in an isolated environment, and artifact-level comparison. The rerun compared 26 generated artifacts: 23 were exact matches and three differed only in floating-point serialization within numerical tolerance; there were no mismatches.

Appendix status

This appendix is a reporting consolidation. It does not retroactively alter ethics status, reconstruct unavailable participant-flow denominators, convert short author-developed indicators into validated scales, or turn the bundled vignette comparison into a factorial experiment.
